IDEA TITLE

An Interactive Job and Internship Platform for Technical Education Department

SMART INDIA HACKATHON 2024

❖Proposed Solution :

1. **Enhance Job Market Connectivity:** Establish a robust and interactive platform that bridges the gap between job seekers and potential employers. Utilize advanced algorithms and AI to match candidates with suitable job opportunities based on their skills, qualifications, and preferences.

2. **Expand Access to Opportunities:** Provide a centralized portal offering exhaustive listings of job opportunities private sector, government sector and overseas employment opportunities.

3. **Offer Comprehensive Critical Resources:** Integrate a suite of resources tailored to job seekers, including professional counseling and career guidance services. Provide tools and resources for resume building, interview preparation, and job application processes.

4. **Improve Student Support:** Implement dedicated sections for internships and industrial training opportunities to assist students in gaining practical experience. Offer mentoring and support services to guide students through the process of securing internships and navigating early career challenges. *By implementing this comprehensive solution, the platform will significantly enhance graduate's connectivity with potential employers, broaden their access to diverse job opportunities, and provide the critical resources and support needed to succeed in the modern job market.*

TECHNICAL APPROACH

SMART INDIA HACKATHON 2024

•**Frontend Development:** Build a responsive React.js interface for job searches, applications , developing internship skills ,resume building ,providing courses and mentorship program.

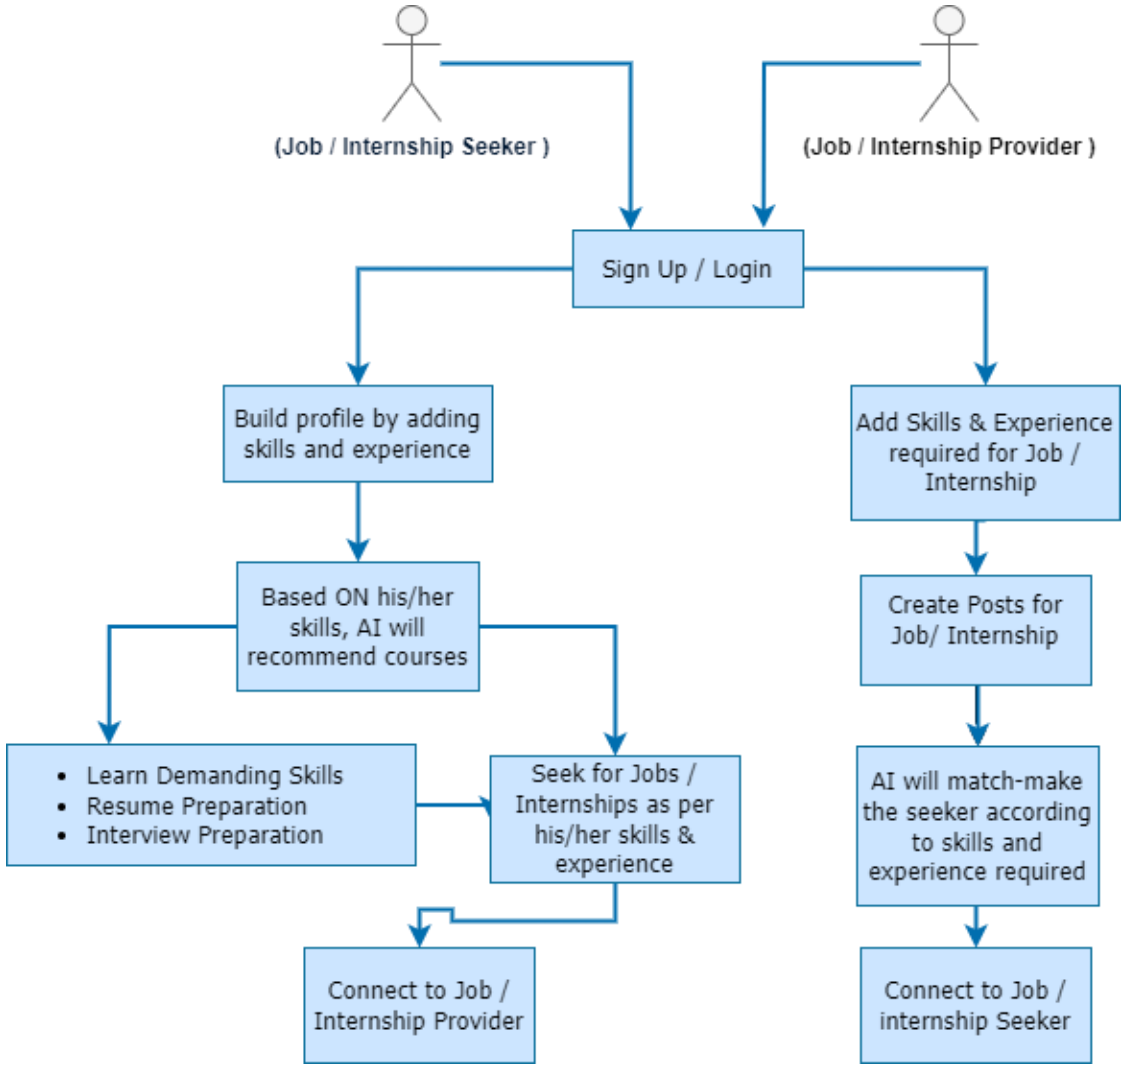

•**Backend Development:** Create RESTful APIs with Node.js, Express.js for managing user data, skills users have or require and integrating machine learning models for recommendations.

•**Machine Learning Integration:** a. Data collection using web scraping from websites like Glassdoor
b. Data preprocessing
c. Feature extraction using Word2vec
d. KNN model for prediction

•**Deployment :** Deploy the application on cloud platforms.

FEASIBILITY AND VIABILITY

SMART INDIA HACKATHON 2024

Risks and Potential Challenges

1. **Model Accuracy and Performance:**
   The K-Nearest Neighbors model may have limitations in handling large datasets or complex patterns.
2. **User Adoption:**
   Potential difficulty in attracting and retaining users if the platform does not meet their needs effectively.

Solution:

1. **Model Accuracy and Performance**:
   Continuously evaluate and fine-tune the model, consider alternative algorithms, and use cross-validation to improve performance.
2. **User Adoption**: Conduct user research to understand needs, invest in user-friendly design, and provide continuous support and updates based on feedback.
